The differences between high school and tertiary education

The prospect of finishing high school and starting tertiary education is a daunting one for many students. You're forced to leave the friends, teachers and surroundings you have spent years with in exchange for a whole new environment. Although this can be a little overwhelming, it can also be an exciting and rewarding time — and, after the stress of Year 12, a welcome change for many. To give you an idea of what to expect in this transition, we've put together a list of differences between high school and tertiary education.

General

Much Needed but Largely Unknown Career - Occupational Hygienist

Occupational hygienists use their scientific knowledge, skills and experience to champion the protection of workers from the hazardous chemicals and other agents they have to work with. Use science & technology to measure worker exposures, assess worker risks and develop controls to improve the workplace environment. Occupational hygienists can provide advice on control strategies including hazard elimination, engineering modifications, administrative controls and finally personal protective equipment. We focus on worker health protection by assessing the risk of hazards and improving work conditions and work practices.
