

Prep Specialists Term 3 Overview

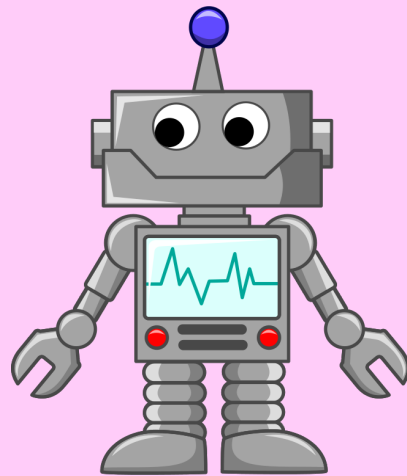

Mandarin

Preps are going to work on topics related to colours and fruits in Mandarin during Term 3. They will be focusing on using pictures and prompt cards to participate in conversations and expressing their own preferences, such as like or dislike.

STEM

Students are exploring how to use technology in healthy ways. They are being introduced to digital systems, data as symbols and how to use symbols as instructions for coding. Students will then use this knowledge and skills to make robots move.

Physical Education

Students are being introduced to the fundamental motor skills of skipping, vertical jump, leaping and kicking and being able to use the skills with and without equipment. Students will be using these skills individually and in conjunction with each other in a multiple of situations.

Visual Arts

Students will explore character strengths through art tasks with an aim to build resilience. Focusing on art elements and principles such as line, rhythm, colour, to create paintings, drawings and prints. At home families can support their child by encouraging them to 'draw for fun' exploring art which relates to their interests is a good way to promote enjoyment in learning.
