

Alumni Career Snapshots

Junior Doctor

Susie Tang

VCE subjects:

- English
- Maths Methods
- Specialist Maths
- Chemistry
- Biology
- Psychology

What path did you take to get there?

- After completion of VCE in 2011, I studied a Bachelor of Biomedical Science/Bachelor of Science at Monash University (4 years).
- Following the undergraduate course, I studied a Doctor of Medicine at Deakin University (4 years).

What have been your career highlights?

- The exposure and opportunities to interact with patients and their families as a medical student and transitioning to becoming a junior doctor has been very rewarding.
- The medical field is endless - I've attended trauma calls in emergency, help delivered babies, assessed sick kids & scrubbed into theatre to help the surgeons.

Top 3 things:

- Everyday is something different
- Helping those who are at their most vulnerable
- You never stop learning

Challenges:

- Endless studying
- Late nights and weekend shifts

My advice:

If you are passionate about making a difference in someone else's life and love your sciences, I would highly recommend Medicine as a career. It's a life-long journey but definitely rewarding!
