## Let's Multiply

## You will need

20 coloured counters (2 different colours A set of Let's Multiply Playing Cards

## How to play

Each player takes 10 counters of 1 colour.

Place cards face down in 2 piles — 1 pile for the number only cards, and 1 pile for the x2, x5, x10 cards.

The first player turns over a card from each pile and says the answer, eg.  $6 \times 2 = 12$ .

This player then covers the 12 on the 100s chart with one of their counters.

The second player then has a turn. If the number is already covered, the player misses a turn.

The game continues until one player doesn't have any counters left.

This player is the winner!
