

4F Learning Journey

Teachers Note

We have had a fantastic term 3, here in 4F.

Throughout the term, we have discovered how we can partition numbers, created questions to get data and turn these into graphs. We have learned how to comprehend what is happening throughout a story using the pictures, words and sentences.

In integrated studies, we looked at the history, present and future of technology. We watched a video showing television move from black and white to colour, as well as how phones, movies and communication has changed over time.

I am so proud of the way the students have taken to learning in the classroom and I look forward to a fantastic term 4.

Here is a look at what we have been learning about this term:

- **Maths** - Practising equal sharing, conducting surveys, and exploring duration and measurement concepts.
- **English** - Reading and enjoying our *Magic Belt* series together.
- **Personal and Social Learning** - Learning about our personal strengths and how to cope with challenging situations.
- **Integrated Studies** - Exploring technologies people have used in the past, present and future, such as phones, cameras, vehicles and televisions.
