Adolescents: Investing in future generations

YOUR WORLD, YOUR FUTURE,
YOUR CHANCE TO CONTRIBUTE TO CHANGE

DOHaD Society
International Society for
Developmental Origins
of Health and Disease

5.45pm - 7.30pm, Monday 21st October 2019

Plenary Theatre, Melbourne Convention & Exhibition Centre

What is DOHaD?

The Developmental Origins of Health and Disease (DOHaD) focuses on the influence of early life events on our risk of developing health conditions later in life.

Why is this important for me?

As an adolescent (age 10-24), your behaviour and experiences can impact your future physical and mental health, and possibly the health of your children. You can't control all your environments but you can make a difference. Join our experts to find out how.

Who should attend?

High school and university students, teachers, parents and anyone interested in the welfare of our future generations

To register for this free event, visit:
www.future-gen.com.au

Join the experts:

Add your voice

Hosted by journalist and ABC TV news reader, Ian Henderson, our amazing panel of scientists, doctors and adolescent community leaders will discuss:

- mental health
- diet & exercise
- indigenous health

They'll provide insight into what YOUR GENERATION can do for your best future.
