

## Recommended Math Websites

*Understanding concepts is essential to the development of a mathematician. Once these concepts are learned and understood the growing mathematician must have an efficient and fluent use of these skills.*

*To facilitate this, your child can play various math games, play games with flash cards (memory, concentration, bingo, etc.), or consult the many quality free websites. [\*Please note that some have ads and/or offer a paid version.] We hope you enjoy the several websites listed here that your child may have worked with already and have been highly recommended by teachers and students alike! Please remember that learners are more successful when skill and fact practice is exciting and enjoyable rather than stressful. Enjoy!*
