

SPARK ENGINEERING CAMP 2018

What is Spark?

The Spark Engineering Camp helps empower students in grades 10-12 to pursue further education pathways and realise their great potential. For the week of the camp, students will stay on a university campus at a residential college and partake in engineering activities and personal development workshops. These activities are run by the dedicated volunteer staffing team, who ensure the students get the most from the experience.

Spark deeply thanks the partnerships formed with engineering companies, which allows us to offer the camp free of charge to students. The camp targets school students from non-traditional backgrounds and equipping them with the skills and knowledge to reach their tertiary education aspirations.

Who are we?

Students just like you! Youth Without Borders is an apolitical, nondenominational organization in which we firmly believe that youth have the capacity to effect change and create the kind of world we want to live in. Importantly the Spark mentors are present or past University students. All of whom are passionate about engineering and recognise the importance of tertiary education.

Who should be nominated

1. Students whom teachers see great potential in, however the student themselves does not fully realise this potential.
2. Students who have a desire to pursue a tertiary degree but struggle to see how they can overcome their current situations to make it happen.

When and where are the camps?

Brisbane: University of Queensland, 9th - 14th July

Melbourne: Ormond College, 2nd - 7th July
