

From our Partner school in France from a Year 7 class

Saint Joseph - La Salle Toulouse

At St Joseph LaSalle Toulouse College we have more than 35 classes, with 9 classes per level, and we are more than 1200 students.

In St Joseph LaSalle Toulouse, We have many options:

- General, this option is normal .
- Sport (HandBall), this option is for the sporty students because the students have many lessons.
- Digital, The students have iPads and a Television in their classroom (like ours)
- And Bilingual, where the students learn both English and German.

In Saint Joseph we have courses in English, French, math, chemistry-physics, science (SLE), history, geography, EMC (MCE), music, sport (PE), art, technology and from fifth grade for all the options except for the bilingual option, we learn Spanish.

In our school, we have a boarding school which can accommodate 180 young people.

Here are some pictures :

We have sports facilities (athletics field, football fields, basketball fields, dojo, handball fields, gymnasiums, etc.)

We also have a CDI (media center), a study room, a game room and even a tiny church.

Our Opinion on the Environment

- In spring or summer, when it's sunny, we don't use air conditioning. Anyway, in our school, there isn't any. So when it is hot, we open the windows to have some fresh air.
- In our high school there are 6 cafeterias. Every day we can have a healthy and organic meal. In some cafeterias, there's a trash can where we can throw the bread, so we can transform it into compost. We also sort our waste, throwing our waste

Sorting our waste according to their nature

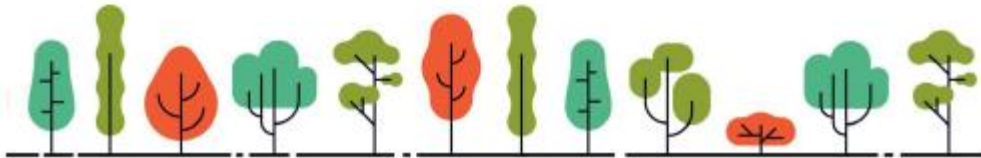

- Last year at Saint Joseph, we sold a lot of reusable aluminum bottles. That's the reason why we don't use plastic bottles.
- In some classes, there are DEL. The DELs use less energy than classic light bulbs for the planet. So we can make energy savings.
- Ecosia is a browser extension that allows you to plant trees. For 45 research, one tree is planted. In July 2020, Ecosia planted more than 5 million trees. This browser extension is Free. Ecosia plants trees in 🇸🇪 Burkina Faso.

The evolution of annual average temperatures in metropolitan France has shown a warming since 1900. This warming has experienced a variable rate, with a particularly marked increase since the 1980s. Over the period 1959-2009, the observed trend is around +0,3 ° Celcius

In France, three factors are important : the waves of heat, allergies and exotic diseases. This mosquito is the carrier of tropical diseases such as dengue and chikungunya.

Rapidly rising sea level and frequency of severe storms threaten thousands of lives each year. With more than 5,800 kilometers of coastline in mainland France, to which must be added nearly 1,200 kilometers of coastline for the overseas departments, France, where one and a half million people live in coastal areas potentially exposed to risk of marine submersion, will be inexorably impacted by rising sea levels. The sea level could increase each year by 1.5 cm with an overall rise of 110 cm by the end of the century, threatening many coastal and low-lying areas.
