

Media Arts Bursaria

Teacher's Note

This term, students have been learning various pre- and post-production media skills using iPads, digital cameras and other technical equipment.

The first half of the term focused on an introduction into photography. This included a combination of both theory-based and practical lessons. In these lessons, students were learning about:

- Safe camera handling
- The parts of a digital camera
- People photography
- Photo consent
- Landscape and object photography
- Taking videos
- Using a storyboard
- Set and character designs
- Stop motion practice
- Photo and video editing

For the second half of the term, students had the opportunity to apply their knowledge and skills in their own stop motion or iMovie trailer project. It was wonderful to see so many creative ideas, characters and set choices.
