What is water used for

Water is very useful with many many purposes used countless times such as

PLANTS

Plants need water to develop, grow and live. Plants such as trees need water to grow. If plants aren't watered they will die.

Humans

Humans need water to live.

Water is useful for humans to regulate body temperature and drink. It can also be used to bathe or clean hands.

ANIMALS

Animals need water to survive, be healthy and hydrate themselves. Animals can also go into water and hunt for fish. Without water all fish in the world would die without oceans.
