Years 3 - 6

Using the Internet Safely

Helping children to stay safe online is something many parents are concerned about. Here are a few tips to help your child/ren use the internet safely:

1. Only let your child visit websites suitable for their age group

2. Set your child's profile to 'private'

3. Show them how to be polite and show respect when communicating with others – get them to think about what they are writing before posting information online

4. Have them keep personal information a secret – name, age, passwords, address, email address, the school they attend, etc.

5. Have them report any unpleasant messages or inappropriate websites
