

# wheat

**In Australia wheat is the major winter crop. sowing starts in autumn and harvesting is usually during spring and summer.**

**The main wheat producing states are Western Australia, New South Wales, South Australia, Victoria and Queensland.**

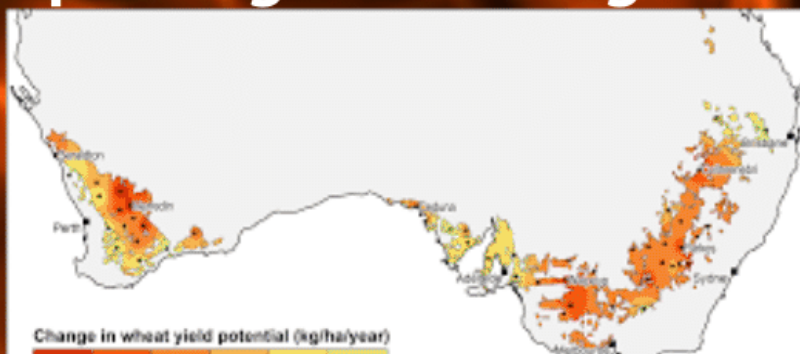

**Factors affecting production of wheat include depth of sowing, row spacing, seed size and herbicide application as well as environmental factors such as soil moisture and temperature.**

**fertile clayey loamy soils having moderate water holding capacity are ideal for wheat cultivation.**

**wheat grows best when temperatures are warm, from 21° to 24° C. Wheat also needs a lot of sunshine, especially when the grains are filling.**
