

Your School Immunisation Program is going digital

We're moving to a simple digital system for your School Immunisation program.

This program, powered by Vitavo, will replace the paper consent card system previously used. We'll capture a digital profile and consent for all visits for the entire year, and this consent can be withdrawn by the parents/guardians at any time.

How it works....

School set up

We work with you to schedule session dates and times and take care of all the system set up.

1

On the day...

We'll coordinate with you for the arrival of students. Once we complete the immunisation, we:

- Email a vaccination summary to the parent/guardian which includes a side effect fact sheet
- Instantly report the vaccination/s to the Australian Immunisation Register
- Make data available for easy to view reporting which we can provide to you on request

Booking Link

We send you a secure link along with instructions for parents. You only need to send one simple email to parents/guardians for them to action.

2

Parent Booking

Parents/Guardians use the weblink to create a reusable Vitavo profile, record medical history and provide consent for their child.

3

What's next?

Over the school holidays we'll send you the secure link and instructions for parents. This simplified process means the lead time for consent can be significantly reduced.
