

Information about lions

By Wallen

The lion is a very dangerous animal in the world. The lion is a very fast animal, the reason why they run because they there food their favourite food to eat is meat but their favourite animal to eat is a zebra

Lions mostly live in Africa they are king of the jungle they are the coolest animal in the world why because they very very fast and they are also predator to zebra bulls and also oryx and a bird

Male lions have manes but the female do not have manes. Lions love to rest so they have enough energy to hunt for there food because if they don't have enough energy they won't be able to catch their food and that's why they love to rest

Lions are the second largest animal and lions only travel in groups. A group, or pride can be up to 30 lions in a group but it only depends on how much water there is and how much food there is to but the female lion are the ones that mostly hunt for their food.
