

# KANGAROOS-INFORMATION REPORT

---

*By Dlyla* 

# INTRODUCTION

.....

- Kangaroos are tall mammals that are Marsupials ( kangaroos have pouches for their babies ). Kangaroos scientific name is *Macropus Rufus*. There are 5 different types of kangaroos in Australia ( red kangaroos, eastern grey kangaroos, antelope kangaroos). Kangaroos are indigenous to Australia.

## HABITAT

---

- Kangaroos live in Australia, kangaroos live in grass plain areas and even savanna's. They are found in New South Wales, Queensland, Victoria, Western Australia and Tasmania. Kangaroos are also found in other islands around Australia.

## DIET

---

- Kangaroos are herbivores which means they only eat grass( sometimes they eat shrubs). They also spend their time eating during dawn and sometimes at dusk. Kangaroos can go without water for a week or for a month.

# CONCLUSION

*In conclusion, kangaroos are mammals and herbivores.*
