

Name: Regine Korbathieh

Child: Kareema Korbathieh, Year 10

Date: 19/02/20

I am very grateful to for my child to learn at a science school and especially one where the Learner Developmental Framework is being implemented as I have noticed the skills and attributes that the program promises to develop being crucial to success in all endeavours of life.

I am working as a Principal Research Scientist and Senior Projects Leader in food product and process development. I have been in various roles on a pre-school Committee of Management for nine years, was the treasurer of the Wheelers Hill Primary School Parents' Association for four years and am currently a member of the Wheelers Hill Primary School (WHPS) School Council (term to finish at the end of Feb 2020). I am passionate about increasing the participation of girls and women in the science industries and I volunteer in the **Scientists in Schools** program. Through these roles I have developed relevant skills including working with diverse people, fund raising, project/budget management, scenario planning, development/implementation/monitoring of strategies.

I am a busy mum with three children: our oldest is in year 10 at JMSS, and our son and youngest daughter are in year 6 and 4 at primary school. I am excited about helping our school to provide the 'value adds' so all our students are engaged, curious, passionate and imaginative in their learnings.
