

# Welcome to 4Y

Work, work, play!

In 4Y, we are finally adjusting to our class routines and getting more independent work done. We are focused during our **literacy rotations**.

During our science lesson, we were learning about living things. After smelling all the flowers, we voted on which flower had the best scent and which one had the worst scent.

Then, we discussed which flowers belong in the same group based on the plants' observable features. We came up with 3 groups. See for yourself what features we were using to group the flowers together.
