

Melbourne City Reflection

I liked that we have the match robot and we also have some sport outside, I don't really have any dislike because it was really good for me and the rest of the class also enjoy it. I had really fun when we have the match because everyone was so excited to see who going to win the soccer match for the robot. I would've like to see more of the robot but in like different style like basketball tennis, etc... The task / work made me feel proud because I built an average hard robot and it was fun to play with other people in the class and have a match against other group. My favourite part was when we do the European Handball because it have a really good exercising.
