

To Mrs Bruitzmen,

I have noticed that, Children are bringing a new Energy Drink to school called PRIME HYDRATION. A 500mL bottle of prime has 200 mg of caffeine and been deemed unsafe for kids under the age of 16. In comparison there is 180 mg of caffeine in 2 Monster Energy Drinks. That's 50mg of caffeine per 100mL of Prime. I personally think that as a School Captain, It is time to take action and Ban Prime.

Caffeine is not safe for kids because it not only interferes with regular development of skills, As well as with emotional and social health, it can also cause things such as high blood pressure, anxiety, Chronic Kidney Disease, Irregular Heart beats, Kids could end up suffering Heart attacks because of this drink!!

Another reason it should be banned is because of the amount of money people spend on prime. Prime is sold at BP Cranbourne West and at Woolworths, who are selling it for a whopping \$20ea! Because its incredibly rare to even find Prime in stock, so people buy lots more than 1 bottle. Which could lead to them drinking more.

Coles have even refused an offer for Prime to be sold in their stores due to safety concerns. 7 News Headlines say “Coles responds to claims it’s ‘cancelled’ Prime drink orders due to ‘safety concerns’ read the full article [Here](#).”

I hope to see some action on Prime soon, Looking forward to hearing from you soon.

Yours Sincerely,
School Captain, Hamish Williams.

PRIME
