

Technology in Mellor iPads in the classroom

- 1) **TOONTASTIC:** This app is designed to tell a story digitally by choosing a scene, climax, setting, conflict, and characters. Students choose music to match the characters' emotions and create a digital storytelling video.
- 2) **BOOK CREATOR:** Children create all kinds of books, including picture books, comic books, photo books, journals, textbooks and more. Children create books of any size or orientation and add pictures that they have taken or created themselves.
- 3) **DOODLE BUDDY:** Children create their own original digital artwork through the drawing tools or editing and enhancing existing images.
- 4) **EXPLAIN EVERYTHING:** Children create presentations or record screencasts to demonstrate a concept or illustrate a tutorial that they have been learning. For example, children may use the app to show how to partition numbers into hundreds, tens and units. Children are able to simultaneously write on page and record their voice to share their learning.
- 5) **VOICE RECORDER:** Children will record themselves reading and listen back to give self-feedback about their fluency, problem solving, tone and volume.
- 6) **FOTOBABBLE:** Students take a photo of their work and record their voice to explain their thinking.
