

ROAD REHABILITATION PROJECTS

INFORMATION SHEET

Overview:

Road projects are an important part of the Town's commitment to renewing our infrastructure. This information sheet provides a brief overview of frequently asked questions for Road Rehabilitation projects.

Questions:

1. After my initial notification letter, will I get any further letters during the works?

If works are significantly delayed or weather becomes a factor, the Town will send out updated progress notification letters.

2. Will access to my property be limited while the works are in progress?

Access for vehicles may be limited during different stages of the project. The Town's contractors and traffic controllers will be able to assist if this is the case. The Town's contractors should inform residents if this is to be for more than a few hours.

3. There was no concrete kerb in front of my crossover prior to the roadworks, so why is there one now?

It has been identified that 'mountable kerb' is the best way to retain stormwater within the road. Our changing weather patterns, has seen more intense storms happening more frequently. The mountable kerb will reduce the incidence of flooding of properties while still providing access. The kerb will normally have a small lip of roughly 20mm at the road edge, rising a further 80mm in a gentle incline, then sloping towards your prior crossover levels. This might feel different when driven over to when there was no lip, however is accepted as standard for vehicle access within WA.

4. The new kerb has just been installed and looks too high for my vehicle?

New kerb is usually laid a few days before the roads final surface is rolled. After the layer of asphalt is laid, the height difference will be reduced. Your crossover and verge levels will be matched into the back of the new kerb, leaving a smooth finish when the works are completed.

ROAD REHABILITATION PROJECTS

INFORMATION SHEET

5. What happens to my reticulation along the kerb line during the works?

Reticulation near the kerb will be removed and capped, before work begins. This means part of your verge may not receive water for the duration of construction. When the job is finished, the reticulation will be reinstated and clean fill material added to hold this reticulation in place.

6. Can I drive over the new concrete kerb straight after it has been placed?

If new kerb has just been placed, it should not be driven over for at least 24 hours. Traffic cones will be placed in front of the new kerb straight after it has been poured. Please do not move any cones, as they may be serving other important safety purposes.

7. Can I drive over the new road surface straight after it has been rolled?

Traffic controllers will inform and guide motorists when works are in progress. Once traffic controllers and the Town's contractors have left the site, it is safe to drive over the road surface. Asphalt does not need drying time.

We hope you have found this information helpful. If you have any other questions regarding this project, or would like further information, please contact the Town's Supervisor of Works Svetlana Ostrovsky on 9285 4300.
